

SciELO Methodology installation on Centos 7

Linux installation

REQUIREMENTS

Hardware Configuration:

8GB RAM minimum

8 vCPU

150GB HD

CentOS release 7.9

Apache 2.2.34

PHP 5.2.10 or 5.2.17 (required)

PHP Modules

- libpng
- soap
- zlib
- XSL
- XML

Installing build subsystem

```
yum install -y perl make wget gcc libxml2-devel openssl openssl-devel openssl-libs curl  
libcurl-devel libjpeg-turbo-devel libpng-devel freetype-devel libxslt libxslt-devel expat-  
devel patch wget glibc.i686 zlib-devel curl-devel
```

Installing EPEL Repository to install mcrypt

```
# yum install epel-release  
# yum install libmcrypt-devel
```

Installing Apache 2.2.34 from source

Getting source code

```
wget -O /usr/src/httpd-2.2.34.tar.gz https://archive.apache.org/dist/httpd/httpd-2.2.34.tar.gz
```

Uncompress

```
# cd /usr/src  
# tar -zxvf httpd-2.2.34.tar.gz
```

Configure

```
cd httpd-2.2.34  
./configure --prefix=/usr --enable-layout=RedHat --enable-mods-shared=all
```

Compile and install

```
make  
make install
```

Installing PHP 5.2.17 from source

It is very important to use this version because php 5.2.17 doesn't work with nealy versions.

Getting source code

```
wget -O /usr/src/php-5.2.17.tar.gz http://museum.php.net/php5/php-5.2.17.tar.gz
```

Uncompress

```
# cd /usr/src  
# tar -zxvf php-5.2.17.tar.gz  
# cd php-5.2.17
```

Patching

<https://stackoverflow.com/questions/28211039/phpbrew-5-3-10-build-error-dereferencing-pointer-to-incomplete-type/34107461>

```
curl -s https://mail.gnome.org/archives/xml/2012-August/txtbgxGXAvz4N.txt | patch -p0
Result:
patching file ext/dom/node.c
Hunk #1 succeeded at 1950 (offset 55 lines).
patching file ext/dom/documenttype.c
Hunk #1 succeeded at 215 (offset 10 lines).
patching file ext/simplexml/simplexml.c
Hunk #1 succeeded at 1343 (offset -74 lines).
```

Configure

```
./configure --prefix=/usr --exec-prefix=/usr --bindir=/usr/bin --sbindir=/usr/sbin --
sysconfdir=/etc --datadir=/usr/share --includedir=/usr/include --libdir=/usr/lib64 --
libexecdir=/usr/libexec --localstatedir=/var --sharedstatedir=/usr/com --mandir=/usr/share/man
--infodir=/usr/share/info --cache-file=../config.cache --with-libdir=lib64 --with-config-file-
path=/etc --with-config-file-scan-dir=/etc/php.d --with-pic --disable-rpath --without-pear --
with-bz2 --with-curl --with-exec-dir=/usr/bin --with-freetype-dir=/usr --with-png-dir=/usr --
enable-gd-native-ttf --without-gdbm --with-gettext --with-iconv --with-jpeg-dir=/usr --
without-openssl --with-zlib --with-layout=Redhat --enable-exif --enable-ftp --enable-magic-
quotes --enable-sockets --enable-wddx --without-mime-magic --without-sqlite --with-libxml-
dir=/usr --with-apxs2=/usr/sbin/apxs --without-mysql --disable-dom --disable-dba --without-
unixODBC --disable-pdo --disable-xmlreader --disable-xmlwriter --disable-json --with-xsl --
enable-dom
```

Compile and install

```
make
make install
```

Copie o arquivo php.ini-recommended para /etc/php.ini

```
# cp php.ini-recommended /etc/php.ini
```

Ajuste o arquivo, modificando e depois reinicie o Apache:

```
# vi /etc/php.ini
display_errors = Off
short_open_tag = On
```

Creating a symbolic link for modules

```
# ln -s /lib /etc/httpd/lib
```

Configure Apache

```
$ echo '
<FilesMatch "\.php$">
  SetHandler application/x-httpd-php
</FilesMatch>
' >> /etc/httpd/conf/httpd.conf
```

Creating a system unit

```
# vi /etc/systemd/system/httpd.service
[Unit]
Description=Apache Web Server
After=network.target remote-fs.target nss-lookup.target

[Service]
Type=forking
PIDFile=/run/httpd.pid
ExecStart=/usr/sbin/apachectl start
ExecStop=/usr/sbin/apachectl graceful-stop
ExecReload=/usr/sbin/apachectl graceful
PrivateTmp=true
LimitNOFILE=infinity

[Install]
WantedBy=multi-user.target

Save the file and run the follow commands

# systemctl daemon-reload
# systemctl enable --now httpd
```

Installation of the SciELO Methodology

Following

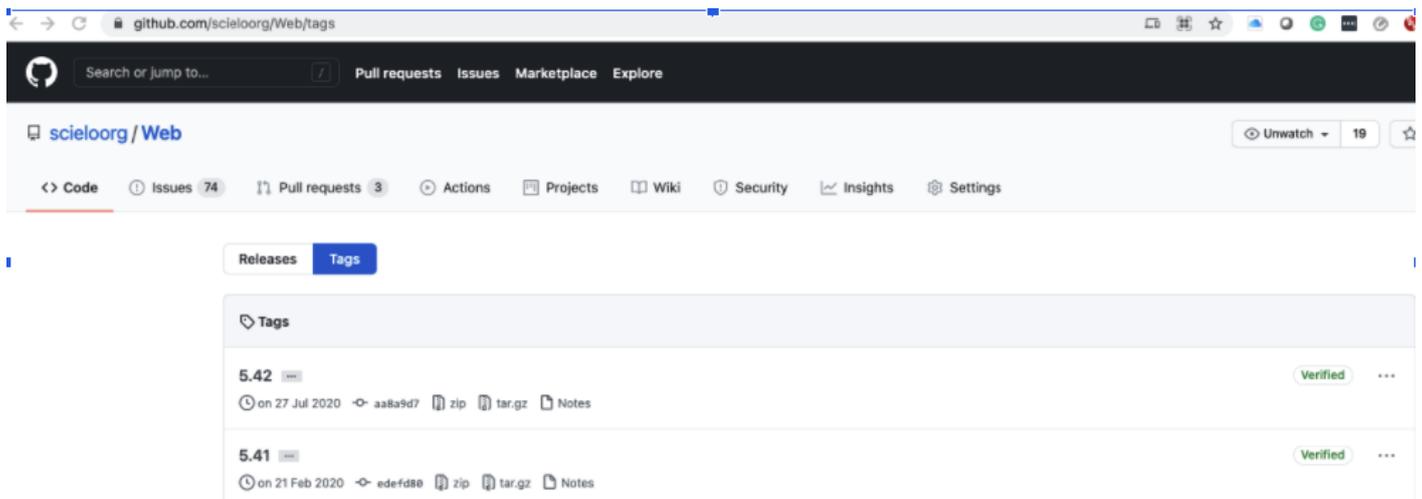

<http://docs.scielo.org/projects/scielo-site/en/latest/howtoinstall.html>

In the link above, there is instruction to download the respective branch from your collection. If you are a new collection and you don't have a branch, you can clone the master.

The process below corresponds to Portugal's branch. If you are from another country it is very important to choose yours. It is important to read the link above to understand what is necessary to change.

For version control we use GitHub, where Tags correspond to the versions of the site.

Check the TAGs here: [SciELO's GitHub](#)

Check the branch of the current version by region and country. See the table at the link below:

[Branch name for each collection](#)

Network Info

Network Websites

Name	url	branch name
Argentina	www.scielo.org.ar	sciELO_arg
Brazil	www.scielo.br	sciELO_scl
Chile	www.scielo.cl	sciELO_chl
Colombia	www.scielo.org.co	sciELO_col
Costa Rica	www.scielo.sa.cr	sciELO_cri
Cuba	sciELO.sld.cu	sciELO_cub
Spain	sciELO.isciii.es	sciELO_esp
Mexico	www.scielo.org.mx	sciELO_mex
Paraguay	sciELO.iics.una.py	sciELO_pry
Portugal	www.scielo.gpeari.mctes.pt	sciELO_prt

Example:

If there is no branch for your collection, we ask that you let us know.

Download the specific version of the SciELO methodology

There are two ways to download: one through the tarball file and the other through the zip file.

ZIP File

Download:

```
wget https://github.com/scieloorg/Web/zipball/<versão_da_tag>
```

Example:

```
wget https://github.com/scieloorg/Web/archive/master.zip
```

After extracting the files, a directory will be created with the name Web-master

```
Web-master
```

Enter the directory and move the content extracted to "/var/www/scielo":

Installation of the CISIS package

```
wget ftp://produtos-scielo:produtos%40scielo@ftp.scielo.br/cisis-product/cisis.zip
```

Extract the contents in the directory:

```
cd /var/www/scielo/proc/  
unzip cisis.zip
```

The CISIS directory will look like this:

Delete the downloaded .zip file

To test operation:

```
mx what
```

Result:

Installation of the WWWISIS package

```
cd /var/www/scielo/cgi-bin  
wget ftp://produtos-scielo:produtos%40scielo@ftp.scielo.br/cisis-product/wxis.exe
```

To test:

```
./wxis.exe hello
```

Configuring the httpd.conf file

Edit the file:

```
vi /etc/httpd/conf/httpd.conf
```

In the end of the file add the line:

```
# Virtual hosts  
Include /etc/httpd/conf.d/vhosts
```

Enter the directory indicated below:

```
mkdir /etc/httpd/conf.d/vhosts
```

Enter the directory indicated below and create the file below:

```
cd /etc/httpd/conf.d/vhosts  
vi vhosts.conf
```

add the follow content:

```
NameVirtualHost <server ip>:80
```

It is important to replace <server ip> to the real ip from machine

In the same directory create another file. The name is related to your instance. For instance, if you are from Bolivia the name will be scielo-org-bo.conf. I will use this name as template:

```

# vi scielo-org-bo.conf

<VirtualHost *:80>
  ServerName vm.scielo.br
  Alias /pdf/ /var/www/scielo/bases/pdf/
  Alias /img/fbpe/ /var/www/scielo/htdocs/img/revistas/
  Alias /img/scimago/ /var/www/scielo/bases/scimago/images/
  LimitRequestFieldSize 9000
  LimitRequestLine 9000
  DocumentRoot /var/www/scielo/htdocs
  DirectoryIndex scielo.php index.php index.html index.htm
  <Directory /var/www/scielo/htdocs>
    Options FollowSymLinks MultiViews
    Order deny,allow
    AcceptPathInfo On
    Allow from all
  </Directory>
  <Directory /var/www/scielo/bases/pdf/>
    Options FollowSymLinks MultiViews
    Order deny,allow
    AcceptPathInfo On
    Allow from all
  </Directory>
  <Directory /var/www/scielo/bases/scimago/images/>
    Options FollowSymLinks MultiViews
    Order deny,allow
    AcceptPathInfo On
    Allow from all
  </Directory>
  <FilesMatch "\.(def)$">
    Order allow,deny
    Allow from all
    Satisfy All
  </FilesMatch>
  ScriptAlias /cgi-bin/ /var/www/scielo/cgi-bin/
  <Directory /var/www/scielo/cgi-bin/>
    AddDefaultCharset ISO-8859-1
    Options FollowSymLinks MultiViews ExecCGI
    AcceptPathInfo On
    Order deny,allow
    Allow from all
  </Directory>

  ErrorLog "|/usr/sbin/rotatelogs -l /var/www/apache/%Y-%m-%d+scielo-br-error.log 5M"
  CustomLog "| /usr/sbin/rotatelogs -l /var/www/apache/%Y-%m-%d+scielo-br-access.log 5M" combined
</VirtualHost>

```

Some fields you have to replace:

ServerName - corresponding to the domain name. Example: www.scielo.org.bo

ErrorLog - corresponding to the log file error. Replace from this template scielo-br to the name of you instance.

Example: scielo-org-bo

CustomLog - corresponding to the log file access. Replace from this template scielo-br to the name of you instance.

Example: scielo-org-bo

NOTES: You have to create the directory `/var/www/apache` to save the files created. Run the command:
`mkdir /var/www/apache`

Mandatory settings

Configuring the `scielo.def.php` file

Below we will show the mandatory configurations for the SciELO Methodology to work. Copy the template file "`scielo.def.php.template`" to your configuration file "`scielo.def.php`".

Enter the directory:

```
cd /var/www/scielo/htdocs/
```

Copy:

```
cp scielo.def.php.template scielo.def.php
```

Edit the file as shown in the following example:

```
vi scielo.def.php
```

This file is separated into blocks `[BLOCK_NAME]`, and by default the configured paths point to `"/home/scielo"`. It is necessary to replace `/home/scielo` to `/var/www/scielo`.

```
ESC :%s/\home\scielo\/var\www\scielo/g
```

Site identification settings

```
[SITE_INFO]
SITE_NAME=SciELO - Scientific Electronic Library Online
SHORT_NAME=SciELO Brazil
SITE_AUTHOR=FAPESP - CNPq - FapUNIFESP - BIREME
ADDRESS_1=R. Dr. Diogo de Faria, 1087 cj.810
ADDRESS_2=04037-003 - Sao Paulo/SP
COUNTRY=Brasil
PHONE_NUMBER=+55 11 3369-4080/4085
#FAX_NUMBER=+55 11 5575-8868
E_MAIL=sciELO@bireme.br
STANDARD_LANG=en
APP_NAME=sciELO
ANALYTICS_CODE=scl
```

APP_NAME and **ANALYTICS_CODE**, are parameters provided by the SciELO team.

```
[SCIELO]
SERVER_SCIELO=vm.sciELO.br

[FULLTEXT_SERVICES]
access="http://vm.sciELO.br/applications/sciELO-
org/pages/services/articleRequestGraphicPage.php?pid=PARAM_PID&caller=PARAM_SERVER"
cited_SciELO="http://vm.sciELO.br/sciELOOrg/php/citedSciELO.php?pid=PARAM_PID"
send_mail="http://vm.sciELO.br/applications/sciELO-
org/pages/services/sendMail.php?pid=PARAM_PID&caller=PARAM_SERVER"
```

Now we will point the block [PATH] to the path of the application, as stated earlier

```
[PATH]

PATH_DATA=/
PATH_CGI-BIN=/cgi-bin/
PATH_SCRIPTS=SciELOXML/
PATH_GENIMG=/img/
PATH_SERIMG=/img/revistas/
PATH_SERIAL_HTML=/revistas/
PATH_XSL=/var/www/sciELO/htdocs/xsl/
PATH_DATABASE=/var/www/sciELO/bases/
PATH_SETTINGS=
PATH_PDF=/var/www/sciELO/bases/pdf
PATH_TRANSLATION=/var/www/sciELO/bases/translation/
PATH_HTDPCS=/var/www/sciELO/htdocs/
PATH_OAI=/var/www/sciELO/htdocs/oai/
PATH_PROC=/var/www/sciELO/proc/
```

Configuring the iah.def file

Copy the template file "iah.def.php.template" to your configuration file "iah.def.php".

Enter the directory:

```
/var/www/scielo/htdocs/iah
```

Copy:

```
cp iah.def.php.template iah.def.php
```

Edit the file as shown in the following example:

```
iah.def.php
```

This file is separated into blocks [BLOCK_NAME], and by default the configured paths point to “/home/scielo”. We will make the move to the location where the application “/var/www/scielo” is, see the examples separated by blocks:

The blocks that must be changed are:

[PATH]

[IAH]

[HEADER]

For instance:

```
[PATH]
PATH_DATA=/iah/
PATH_CGI-BIN=/var/www/scielo/cgi-bin/iah/
PATH_DATABASE=/var/www/scielo/bases/

[APPEARANCE]
BODY BACKGROUND COLOR=white
BODY BACKGROUND IMAGE=
BODY TEXT COLOR=black
BODY LINK COLOR=blue
BODY VLINK COLOR=blue
BAR BACKGROUND COLOR=#B0C2D5
BAR TEXT COLOR=black
ERROR TEXT COLOR=
WARNING TEXT COLOR=

[HEADER]
LOGO IMAGE=scielog.gif
LOGO TEXT COLOR=
LOGO BACKGROUND COLOR=
LOGO URL=www.scielo.br
HEADER IMAGE=^ponlinep.gif^eonlinee.gif^ionlinei.gif
HEADER TEXT COLOR=
HEADER BACKGROUND COLOR=
HEADER URL=www.scielo.br

[IAH]
MANAGER E-MAIL=scielo@bireme.br
MAINTENANCE=OFF
REVERSE MODE=ON
MULTI-LANGUAGE=ON
LOG_DATABASE=/var/www/scielo/bases/logdia/iahlog
```

Configuring the article.def file

Copy the template file "article.def.php.template" to your configuration file "article.def.php".

Enter the directory:

```
/var/www/scielo/htdocs/iah
```

Copy as directed:

```
article.def.php.template to article.def.php
```

Edit the file as shown in the following example:

```
article.def.php
```

This file is separated into blocks [BLOCK_NAME], and by default the configured paths point to “/home/scielo”. We will make the move to the location where the application “/var/www/scielo” is, see the examples separated by blocks:

The blocks that must be changed are:

```
[FILE_LOCATION]
```

```
[VARIABLES]
```

Exemplo:

```
[FILE_LOCATION]
```

```
FILE HEADER.IAH=/var/www/scielo/cgi-bin/iah-styles/header.pft
FILE QUERY.IAH=/var/www/scielo/cgi-bin/iah-styles/query.pft
FILE LIST6003.PFT=/var/www/scielo/cgi-bin/iah-styles/list6003.pft
FILE PROC.PFT=/var/www/scielo/htdocs/pfts/proc_split_mst.pft
FILE iso.pft=/var/www/scielo/cgi-bin/iah-styles/fbiso.pft
FILE abn.pft=/var/www/scielo/cgi-bin/iah-styles/fbabn.pft
FILE van.pft=/var/www/scielo/cgi-bin/iah-styles/fbvan.pft
FILE places.pft=/var/www/scielo/cgi-bin/iah-styles/place-generico.pft
FILE month1.pft=/var/www/scielo/cgi-bin/iah-styles/month1.pft
FILE month2.pft=/var/www/scielo/cgi-bin/iah-styles/month2.pft
FILE scistyle.pft=/var/www/scielo/cgi-bin/iah-styles/scistyle.pft
FILE AHBTOP.HTM=/var/www/scielo/cgi-bin/iah-styles/%lang%/ahbtop.htm
FILE AHLIST.PFT=/var/www/scielo/cgi-bin/iah-styles/%lang%/ahlist.pft
FILE ahlist.pft=/var/www/scielo/cgi-bin/iah-styles/%lang%/ahlist.pft
FILE LATTES.*=%path_database%lattes/lattes.*
FILE citation.xml=/var/www/scielo/cgi-bin/iah-styles/fbisoXML.pft
```

```
[VARIABLES]
```

```
VARIABLE APP_PATH=/var/www/scielo/
VARIABLE APP_REVISTAS_PATH=/var/www/scielo/htdocs/revistas/
VARIABLE APP_REVISTAS_RELPATH=/revistas/
VARIABLE APP_IMG_REVISTAS_RELPATH=/img/revistas/
VARIABLE APP_IMG_RELPATH=/img/
```

Configuring the title.def file

Copy the “title.def.php.template” template file to your “title.def.php” configuration file.

Enter the directory:

```
/var/www/scielo/htdocs/iah
```

Copy as directed:

```
title.def.php.template to title.def.php
```

Edit the file as shown in the following example:

```
title.def.php
```

This file is separated into blocks [BLOCK_NAME], and by default the configured paths point to “/home / scielo”. We will make the move to the location where the application “/var/www/scielo” is, see the examples separated by blocks:

The blocks that must be changed are:

```
[FILE_LOCATION]
[VARIABLES]

[FILE_LOCATION]

FILE DATABASE.*=%path_database%title/title.*
FILE FULINV.*=%path_database%title/titsrc.*
FILE PREINV.*=%path_database%title/titsrcp.*

FILE HEADER.IAH=/var/www/scielo/cgi-bin/iah-styles/header.pft

FILE scistyle.pft=/var/www/scielo/cgi-bin/iah-styles/scistyle.pft
FILE places.pft=/var/www/scielo/cgi-bin/iah-styles/place-generico.pft
FILE iso.pft=/var/www/scielo/cgi-bin/iah-styles/fbsrc1.pft
FILE van.pft=/var/www/scielo/cgi-bin/iah-styles/fbsrc1.pft
FILE abn.pft=/var/www/scielo/cgi-bin/iah-styles/fbsrc1.pft
FILE issue.*=%path_database%issue/issue.*
FILE facic.*=%path_database%issue/facic.*
FILE artigo.*=%path_database%artigo/artigo.*
FILE author.*=%path_database%artigo/author.*
FILE title.*=%path_database%title/title.*

[VARIABLES]
VARIABLE APP_PATH=/var/www/scielo/
VARIABLE APP_REVISTAS_PATH=/var/www/scielo/htdocs/revistas/
VARIABLE APP_REVISTAS_RELPATH=/revistas/
VARIABLE APP_IMG_REVISTAS_RELPATH=/img/revistas/
VARIABLE APP_IMG_RELPATH=/img/
```

Configuring php.ini

The php.ini file is located in the standard PHP installation directory, as shown below.

```
vi /etc/php.ini
```

When opening the file with an editor, search for the word `short_open_tag`, it is defined according to the model:

```
short_open_tag = Off
```

Change to:

```
short_open_tag = On
```

Save the file and restart apache.

Configuration of "hosts" and "Vhost"

Check the IP of the Server that is installing the methodology:

Edit the "hosts" file of the Server and or make the correct notes on your DNS server:

```
vi /etc/hosts
```

Add the following line:

```
<ip_do_servidor> vm.scielo.br
```

To test the functioning of wwwisis in the web environment, type in your browser:

<http://vm.scielo.br/cgi-bin/wxis.exe?hello>

Access the site

Publishing statistics

SciELO The Scientific Electronic Library Online - SciELO is an electronic library covering a selected collection of Brazilian scientific journals.

The library is an integral part of a project being developed by **FAPESP** - Fundação de Amparo à Pesquisa do Estado de São Paulo, in partnership with **BIREME** - the Latin American and Caribbean Center on Health Sciences Information. Since 2002, the Project is also supported by **CNPq** - Conselho Nacional de Desenvolvimento Científico e Tecnológico.

The Project envisages the development of a common methodology for the preparation, storage, dissemination and evaluation of scientific literature in electronic format.

As the project develops, new journal titles are being added in the library collection.

about this site This is the home page of SciELO Brasil Site.

The objective of the site is to implement an electronic virtual library, providing full access to a collection of serial titles, a collection of issues from individual serial titles, as well as to the full text of articles. The access to both serial titles and articles is available via indexes and search forms.

SciELO site is an integral part of the FAPESP/BIREME/CNPq Project and it is an application of the methodology being developed by the project, particularly the Internet Interface module.

The site will be constantly updated both in form and content, according to the project's advancements.

Gera Padrao Script

Edit the gerapadrão.bat file:

```
vi /var/www/scielo/proc/GeraPadrao.bat
```

Changing the following parameters:

Before:

```
call notepad %scielo%\serial\scilista.lst
```

After:

```
call notepad %var%\www\scielo\serial\scilista.lst
```

Before:

```
md %scielo%\web\bases-work
```

After:

```
md %var%\www\scielo\web\bases-work
```

Before:

```
call GeraScielo.bat \scielo \scielo\web log\GeraPadrao.log adiciona
```

After:

```
call GeraScielo.bat .. .. log\GeraPadrao.log adiciona
```

Rename the directory:

```
cd /var/www/scielo  
mv serial-modelo serial
```

Creating user scielo and set permission

This user will be used to update files and processing databases.

```
# useradd -c "SciELO User Admin" scielo
```

Set permission to scielo user

I am considering Apache Root Dir is /var/www/scielo

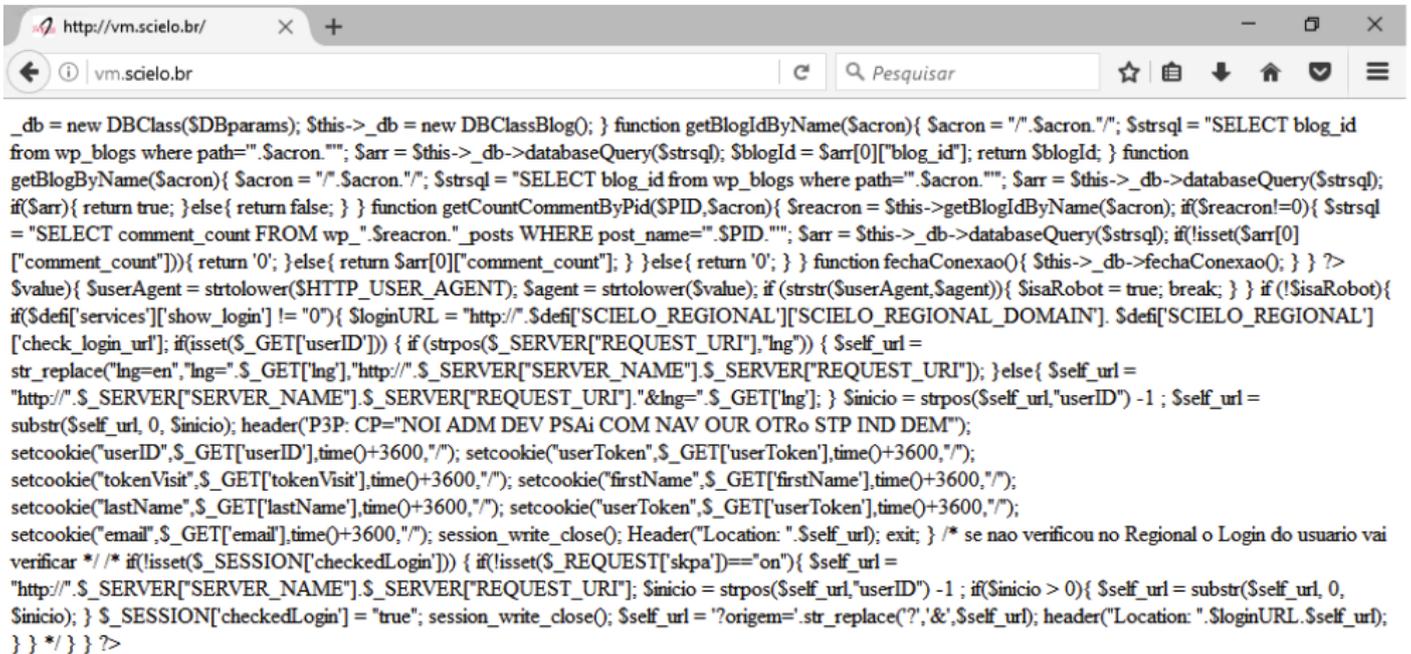

```
# chown -R scielo. /var/www/scielo/
```

Fixing Directory and File permissions

```
# find /var/www/scielo/ -type d -exec chmod 755 {} \;  
# find /var/www/scielo/ -type f -exec chmod 644 {} \;  
# cd /var/www/scielo/  
# find proc/ -name *.bat -exec chmod 755 {} \;  
# find proc/ -name *.sh -exec chmod 755 {} \;  
# find cgi-bin/ -name *.bat -exec chmod 755 {} \;  
# find cgi-bin/ -name *.sh -exec chmod 755 {} \;  
# find cgi-bin/ -name *.exe -exec chmod 755 {} \;  
# cd proc  
# chmod 755 cisis/*  
# chmod 755 call  
# chmod 755 rem
```

Possible errors

The error below is common, to fix it we have to change the php.ini file

```
_db = new DBClass($DBparams); $this->_db = new DBClassBlog(); } function getBlogIdByName($sacron) { $sacron = "/" . $sacron . "/"; $strsql = "SELECT blog_id
from wp_blogs where path='". $sacron . "'"; $sarr = $this->_db->databaseQuery($strsql); $blogId = $sarr[0]["blog_id"]; return $blogId; } function
getBlogByName($sacron) { $sacron = "/" . $sacron . "/"; $strsql = "SELECT blog_id from wp_blogs where path='". $sacron . "'"; $sarr = $this->_db->databaseQuery($strsql);
if($sarr) { return true; } else { return false; } } function getCountCommentByPid($PID, $sacron) { $sacron = $this->getBlogIdByName($sacron); if($sacron != 0) { $strsql
= "SELECT comment_count FROM wp_". $sacron . "_posts WHERE post_name='". $PID . "'"; $sarr = $this->_db->databaseQuery($strsql); if(!isset($sarr[0]
["comment_count"])) { return '0'; } else { return $sarr[0]["comment_count"]; } } else { return '0'; } } function fechaConexao() { $this->_db->fechaConexao(); } } ?>
$value) { $userAgent = strtolower($HTTP_USER_AGENT); $sagent = strtolower($value); if (strpos($userAgent, $sagent)) { $isaRobot = true; break; } } if (!$isaRobot) {
if($defi['services']['show_login'] != "0") { $loginURL = "http://" . $defi['SCIELO_REGIONAL']['SCIELO_REGIONAL_DOMAIN'] . $defi['SCIELO_REGIONAL']
['check_login_url']; if(isset($_GET['userID'])) { if (strpos($_SERVER['REQUEST_URI'], "lng")) { $self_url =
str_replace("lng=en", "lng=" . $_GET['lng'], "http://" . $_SERVER['SERVER_NAME'] . $_SERVER['REQUEST_URI']); } else { $self_url =
"http://" . $_SERVER['SERVER_NAME'] . $_SERVER['REQUEST_URI'] . "&lng=" . $_GET['lng']; } $inicio = strpos($self_url, "userID") - 1; $self_url =
substr($self_url, 0, $inicio); header("P3P: CP='NOI ADM DEV PSAi COM NAV OUR OTRo STP IND DEM'");
setcookie("userID", $_GET['userID'], time()+3600, "/"); setcookie("userToken", $_GET['userToken'], time()+3600, "/");
setcookie("tokenVisit", $_GET['tokenVisit'], time()+3600, "/"); setcookie("firstName", $_GET['firstName'], time()+3600, "/");
setcookie("lastName", $_GET['lastName'], time()+3600, "/"); setcookie("userToken", $_GET['userToken'], time()+3600, "/");
setcookie("email", $_GET['email'], time()+3600, "/"); session_write_close(); Header("Location: " . $self_url); exit; } /* se nao verificou no Regional o Login do usuario vai
verificar */ if(isset($_SESSION['checkedLogin'])) { if(isset($_REQUEST['skpa'])=="on") { $self_url =
"http://" . $_SERVER['SERVER_NAME'] . $_SERVER['REQUEST_URI']; $inicio = strpos($self_url, "userID") - 1; if($inicio > 0) { $self_url = substr($self_url, 0,
$inicio); } $_SESSION['checkedLogin'] = "true"; session_write_close(); $self_url = '?origem=' . str_replace('?', '&', $self_url); header("Location: " . $loginURL . $self_url);
} } } } ?>
```

The php.ini file is located in the standard PHP installation directory, as shown below.

```
vi /etc/php.ini
```

When opening the file with an editor, search for the word `short_open_tag`, it is defined according to the model:

```
short_open_tag = Off
```

Change to:

```
short_open_tag = On
```

Save the file and restart apache.

[GitHub PaperBoy Repository](#)

What is PaperBoy?

PaperBoy is a utility for sending SciELO data from local website servers for processing and also from servers in a collection for network processing. The utility allows sending bases for processing, images, pdfs, translations and XML's.

- Windows Local Server - Installed and configured the PaperBoy utility on the Windows Local server to send databases to the homologation site methodology server.
- Methodology Linux Server - Installed and configured the PaperBoy utility on the new methodology server, for sending server bases to the SciELO FTP server, to process the data and add it to the SciELO Analytics website.

Prerequisites for the functioning of PaperBoy - Linux

NOTE: The following configuration is for sending bases from the Linux server Production application methodology to the SciELO FTP server.

As described at the beginning of the PaperBoy topic, the installation and configuration of the paperboy on the new server Methodology is necessary for sending bases to the SciELO FTP server, the data sent will go through a normalization process and inserted on the Analytics SciELO website, the data are used as collection metrics.

- Metrics data from the Bolivia collection that are on the Analytics site .:

For the operation of the PaperBoy utility on linux it is important to note that it is not necessary to install prerequisites. By default Python is already included in the Linux distribution, in which case we have the distribution is Centos.

To find the version of the distribution used, run the following command .:

```
CentOS Linux release 7.7.1908 (Core)
```

As stated earlier, it is not necessary to install Python since it is installed in the distribution.

To find the version of python installed, run the following command .:

```
python --version
```

NOTE: The commands must be executed at the server terminal.

In linux distributions as python is native, the modules are already pre-installed, so we don't need to install the paramiko and pycrypto modules, as we did on windows.

Configuring PaperBoy - Linux

In the Methodology server, the use of the PaperBoy utility will be in Docker, as stated above, we do not need to install Python or the modules since python is native to linux distributions.

We need to follow some steps to create the container .:

- Step 1:. Create the directory to store the paperboy configuration file :.
 - `mkdir -m 775 /var/www/scielo/scripts/paperboy`
- Step 2: Go to the newly created directory :.
 - `cd /var/www/scielo/scripts/paperboy`
- Step 3: Create paperboy configuration file :.
 - `touch config.ini`
- Step 4: Open the configuration file we just created :.
 - `vim config.ini`

Configuring PaperBoy for sending bases - Linux

- Step 1:. Make a copy of the paperboy configuration data to the configuration file we created in the previous topic Configuring PaperBoy - Linux
- Observation: In the github paperboy repository it is possible to make a copy of the data that we are going to use in the configuration file.
- Step 2: Now with the data copied to the config.ini file we will edit and add the credentials for collecting and sending data to FTP ScIELO.
- Step 3: See the config.ini file below without changes.

```
#Diretório de origem de coleta dos dados de bases
source_dir=/var/www/scielo
#Diretório do Cisis
cisis_dir=/var/www/scielo/proc/cisis
#Diretório onde fica o arquivo da scilista.lst
scilista=/var/www/scielo/serial/scilista.lst
#Diretório de destino dos dados enviados
destiny_dir=
#Dados do servidor FTP
#Servidor FTP usado
server=
tipo de servidor ftp
server_type=sftp
#Porta de conexão com o servidor FTP
port=22
#Usuário FTP
user=
#Senha de acesso
password=
```

NOTE:I removed comments from the config.ini file for explanation purposes.

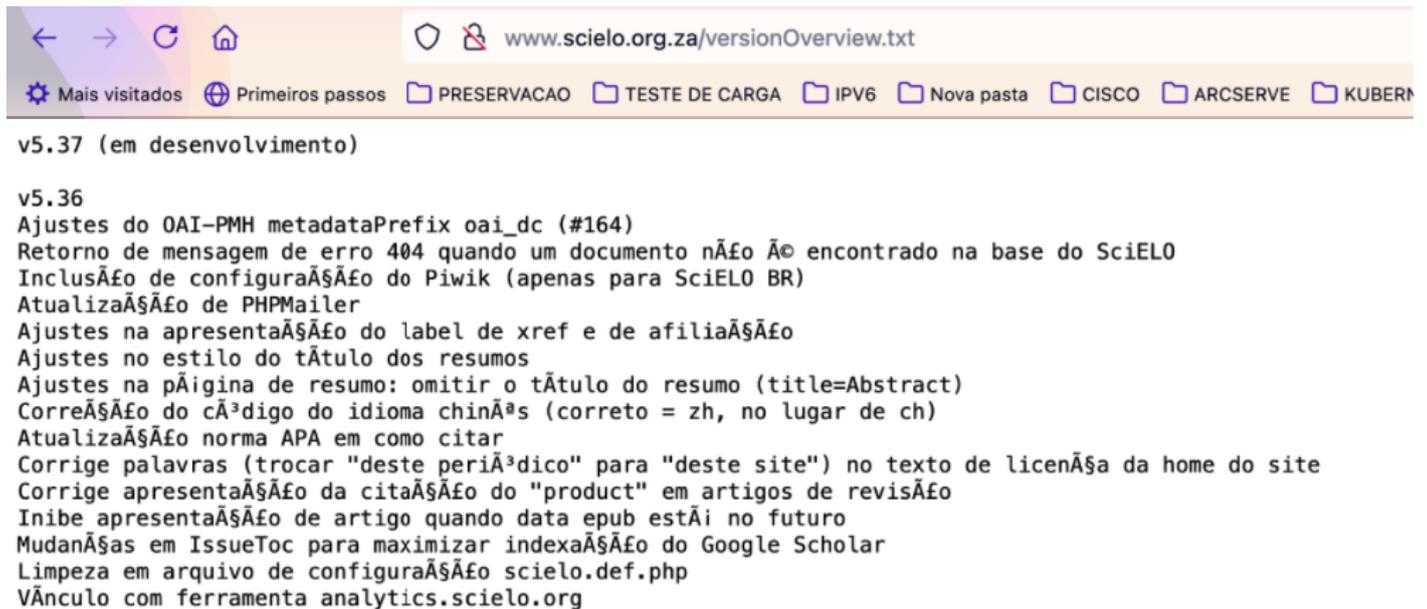

Below we have the config.ini file already configured with all the necessary parameters for sending the bases.

```
#Diretório de origem de coleta dos dados de bases
source_dir=/var/www/scielo
#Diretório do Cisis
cisis_dir=/var/www/scielo/proc/cisis
#Diretório onde fica o arquivo da scilista.lst
scilista=/var/www/scielo/serial/scilista.lst
#Diretório de destino dos dados enviados
destiny_dir=
Observação:. Não configuramos o destino dos dados uma vez que o usuário de ftp já possui o acesso ao diretório da coleção.
#Dados do servidor FTP
server=ftp.scielo.br
server_type=ftp
port=21
user=scielo.bo
password=blabla
```

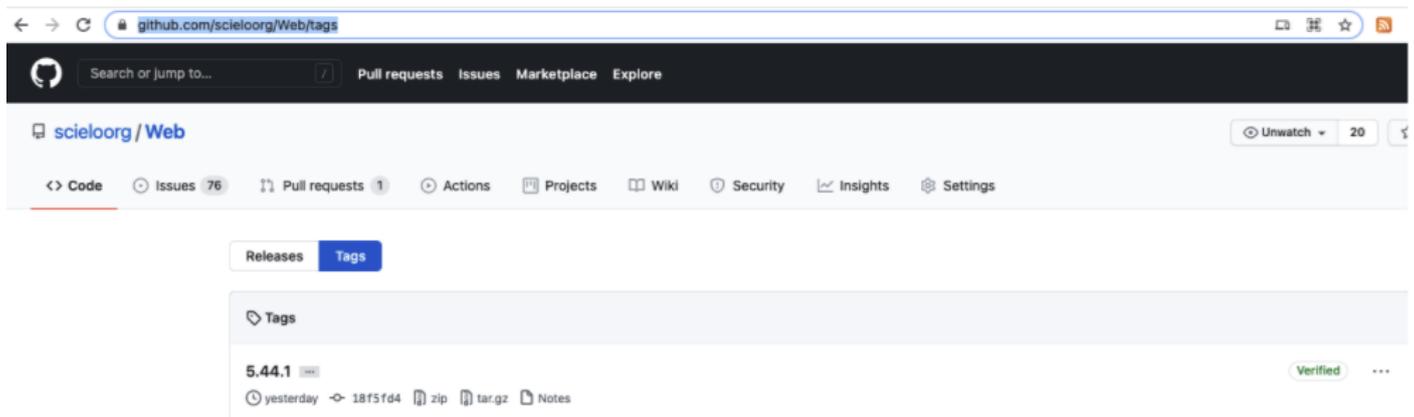

NOTE:I removed comments from the config.ini file for explanation purposes.

How to upgrade SciELO Methodology

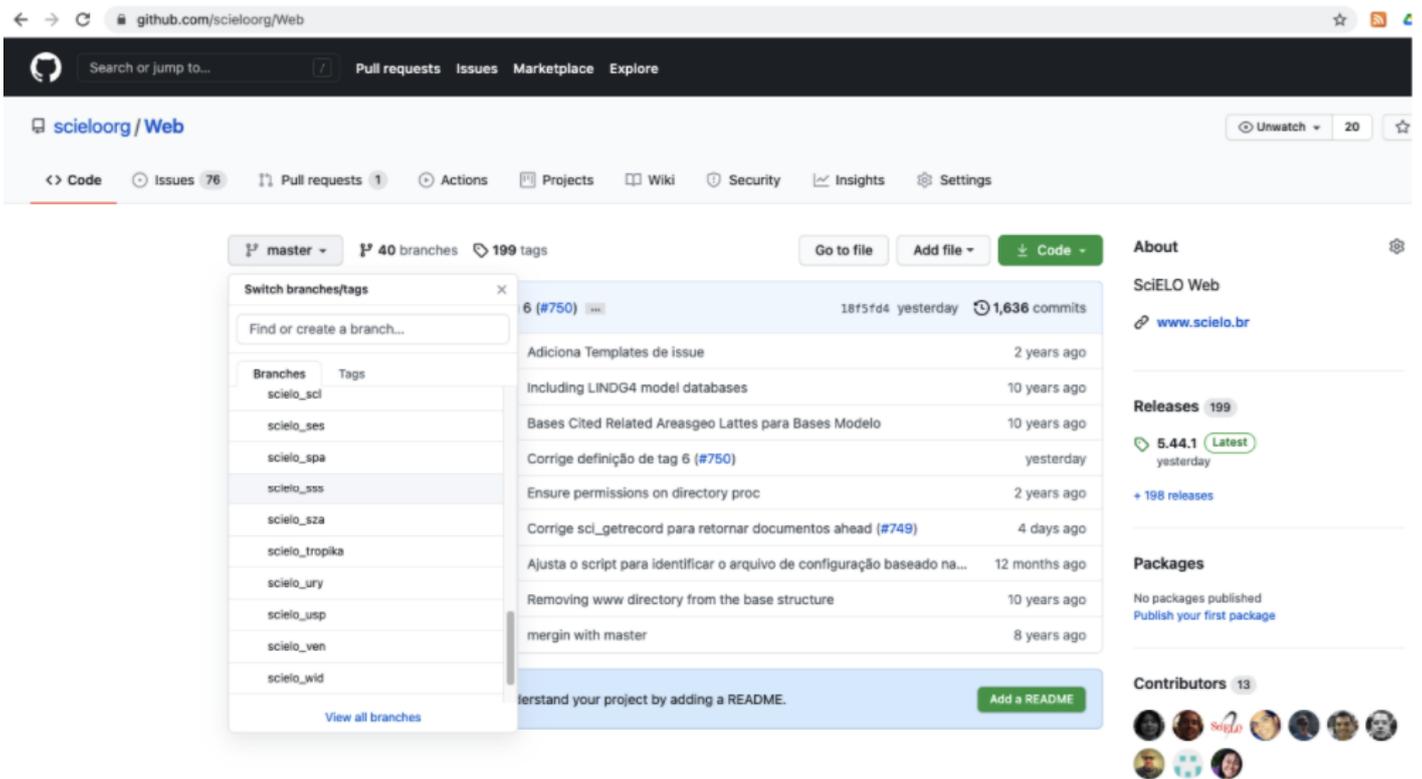

To upgrade SciELO Methodology you have to download the latest code from our [GitHub Repository](#). Before updating, check what version is your website. For instance, we are going to check the version from SciELO ZA: <http://www.scielo.org.za/versionOverview.txt>

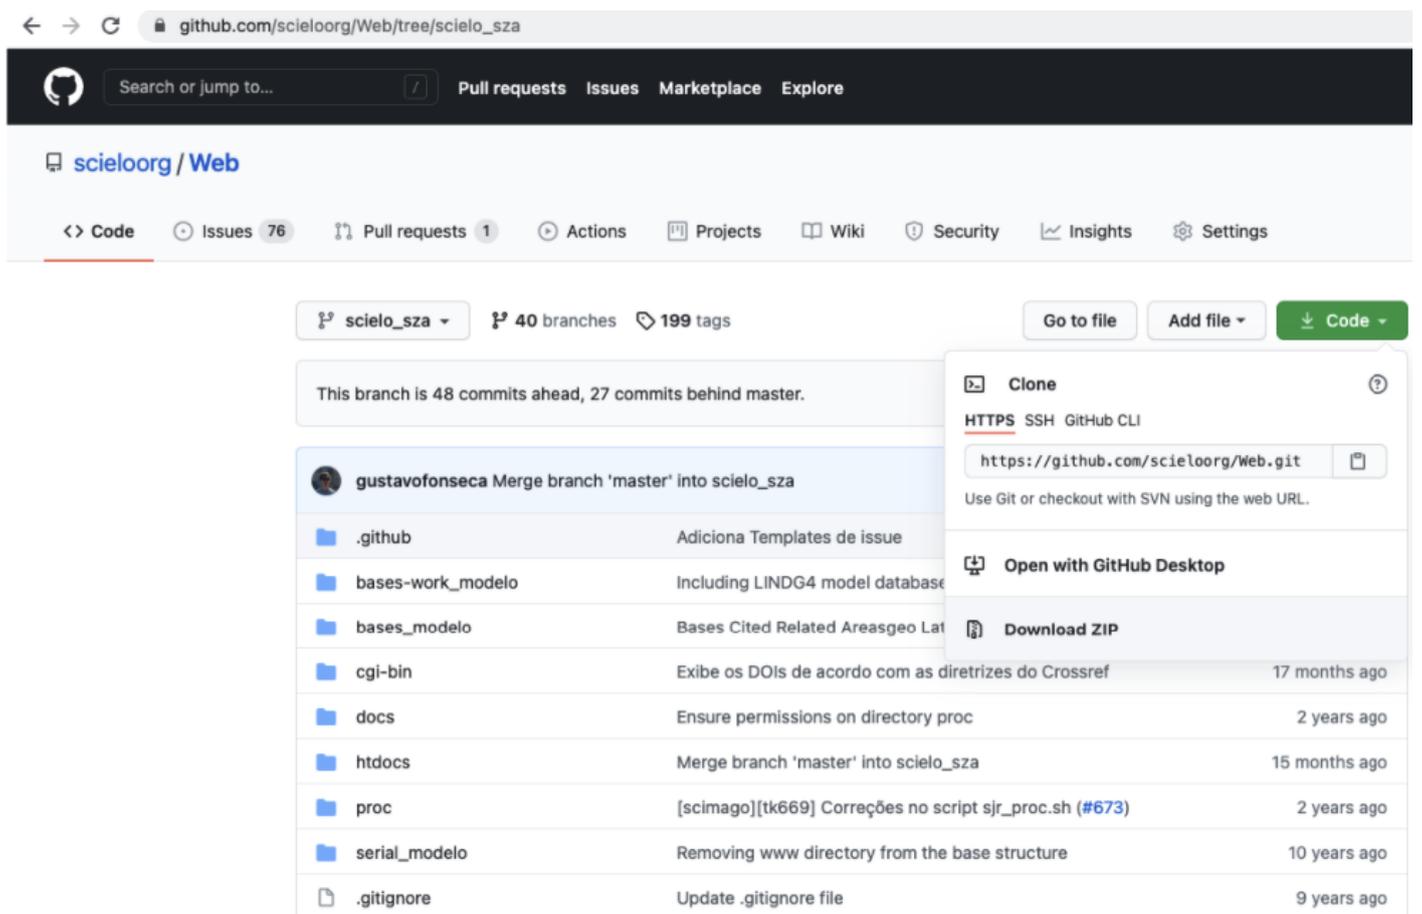

The first line that shows is the version. Click here to check which version SciELO Methodology is: <https://github.com/scieloorg/Web/tags>

From this moment, SciELO code is in 5.44.1 and SciELO ZA is in 5.37. To upgrade we have to download the branch from SciELO ZA. Each collection has its own branch. To check yours, click in the bottom master and select the branch scielo_<acron from your collection>. In this example we selecting the scielo_sza

After selecting the branch click in the bottom right corner code and select Download ZIP:

After downloading the zip package you have to send it to the Linux Server. You can use WinSCP to send it.

The other alternative is download it directly from the link

https://github.com/scieloorg/Web/archive/refs/heads/scielo_sza.zip using wget command. If your collection isn't sza you have to change the acronym from this link.

```
$ cd /tmp
$ wget https://github.com/scieloorg/Web/archive/refs/heads/scielo_sza.zip
$ unzip scielo_sza.zip
$ rsync -Cravp /tmp/Web-scielo_sza/htdocs/ /var/www/scielo/htdocs/
$ rsync -Cravp /tmp/Web-scielo_sza/cgi-bin/ /var/www/scielo/cgi-bin/
$ rsync -Cravp /tmp/Web-scielo_sza/proc/ /var/www/scielo/proc/
```

Fixing permissions

Once you have upgrade the directories you have to fix the permissions.

```
find /var/www/scielo/ -type d -exec chmod 755 {} \;
find /var/www/scielo/ -type f -exec chmod 644 {} \;
cd /var/www/scielo/
find proc/ -name *.bat -exec chmod 755 {} \;
find proc/ -name *.sh -exec chmod 755 {} \;
find cgi-bin/ -name *.bat -exec chmod 755 {} \;
find cgi-bin/ -name *.sh -exec chmod 755 {} \;
find cgi-bin/ -name *.exe -exec chmod 755 {} \;
cd proc
chmod 755 cisis/*
chmod 755 call
chmod 755 rem
```

References
