_images/converter_issue_selected.png

3. Click on **OK** button.

4. Converter uses these data to identify the issue, [markup and body folders](#). If the data are correct, the program will list the markup files.

_images/converter_files_selected.png

5. Click on **Convert** button.

6. Converter will convert the selected files.

For each file, the program:

- “
 - extracts the identified data
 - compares the data in the document and the data in the issue database

Attention

If there are any unmatched data related to the issue, the program will not create the database. It will be necessary to correct the data in Markup or in [Title Manager](#)

If the database is generated, the result will be shown on the screen.

_images/converter_resultado.jpg

Results:

- successfully converted: [] (in red)
- converted, with errors: [X] (in blue)

There are some not fatal markup errors, which could have been corrected at SGML Parser stage.

- not converted: (in green)

It is related to unmatched data of the issue database and the data in the markup file. For instance: - The issue's volume is 30, and the volume in the document is 3. The program will indicates an error. In this case, the correction is in the markup file.

7. Click on each file in the result area, then on **Result** button, to view the result of the conversion.

Successfully converted

_images/converter_view_report.png

Converted, but no fatal errors: markup error

_images/converter_resultado2.jpg

Converted, but no fatal error: some bibliography references not identified

“ Converter also marks, in the body file, the end of the paragraph of each bibliography reference found in markup file. It is used by the website to create [Links] at the end of the paragraph of each reference.

_images/converter_resultado6.jpg _images/converter_resultado6b.jpg

If Converter was not able to find the markup references in body references:

_images/converter_resultado5.jpg

It is necessary to evaluate the references in markup and in body. There must be some different character that causes the error.

Not converted, because of fatal errors
